About HPE Aruba Networking Central

HPE Aruba Central delivers AI-native, cloud-managed network operations through a modern, microservices-based platform networking seamlessly integrated with GreenLake. HPE Aruba Networking Central delivers agentic intelligence, automation, predictive insights, and streamlined configuration workflows enable self-driving operations across branch, campus, remote, and data center environments. HPE Aruba Networking Central also supports heterogeneous networks by providing visibility and monitoring for third-party devices, and it offers deployment flexibility for customers that require an on-premises option. For more information, [refer to the solution overview](#) and [FAQ](#).

HPE Aruba Networking Central offers [subscriptions](#) based on deployment model, device type, or user-based services, allowing organizations to align technology choices with their specific business priorities rather than following a one-size-fits-all approach. Deployment options include cloud, HPE Aruba Networking Central on-premises, virtual private Cloud (VPC), and managed service provider (MSP), all of which support Foundation and Advanced subscription tiers. Device-based licensing applies to HPE Aruba Networking Access Points, switches, HPE Networking SD-Branch Gateways, and WLAN, with Foundation or Advanced subscriptions required per device, while user-based licensing is available through HPE Aruba Networking Central NAC pro for environments that need concurrent user control. This ordering guide provides detailed information on subscriptions for each network device family. In addition, flexible consumption options and payment models are available with the as-a-service (aaS) SKUs for access points, switches, and gateways. The flexible consumption options include delayed activation for up to 90 days for direct orders only.

Note: The Foundation and Advanced subscription features described in this ordering guide are also applicable to the aaS SKUs. The aaS SKUs end with “AAS” and are listed separately in the ordering information table.

HPE Aruba Networking Central subscriptions for access points and switches

Table 1 consolidates the features supported in the Foundation and Advanced subscription tiers for all supported HPE Aruba Networking Access Points and switches. For APs running HPE Aruba Networking Wireless Operating System 10, note that services requiring a gateway (live upgrade, multizone, L2/L3 roaming, and unified SD-Branch monitoring and configuration) are not supported in instant mode. OS-10 and HPE Aruba Networking Central support the HPE Networking Microbranch solution, while instant 8.x and HPE Aruba Networking Central support IAP virtual private networks (VPN). For switches, subscription tiers vary by switch family based on port count, routing capabilities, and software requirements, and apply to switches running AO-S or HPE Networking CX Software.

Table 1. Features for APs and switches of HPE Aruba Networking Central Foundation and Advanced subscriptions

Features	Foundation	Advanced
Onboarding		
ZTP/activate		
Enables plug-and-play device setup by automatically applying cloud-based configurations when powered on, eliminating on-site IT involvement.	✓	✓
Mobile app		
HPE Aruba Networking Central installer mobile app provides simple, secure workflows for non-IT staff to onboard and configure network devices using QR codes and delegated access	✓	✓
Site planning		
Floorplan manager with basic overlays		
Plan wireless coverage of sites and create AP floorplans with a real-time view of the radio environment.	✓	✓

Features	Foundation	Advanced
Floorplan manager with third-party integrations Integrate third-party tools like Ekahau and Hamina for enhanced floorplan management and site planning.	✓	✓
Topology with basic and advanced overlays Graphical representation of the site network layout with details of all network devices being managed. Advanced visualization includes overlays for signal, utilization, clients, and more.	✓	✓
Configuration		
Element profiles Configure and apply network settings—like WLAN, VLAN, and DNS—profiles across different hierarchical levels (global, site collection, site, device).	✓	✓
Device profiles Define device-specific configuration templates for streamlined management.	✓	✓
Network profiles Centralized management of network-wide configuration parameters	✓	✓
Config override visualization Visualize configuration overrides to quickly identify and resolve discrepancies.	✓	✓
Config multi-step commit Review, validate, and apply configuration changes in stages to ensure accuracy and reduce risk.	✓	✓
Troubleshooting		
Audit trail Review total number of logs generated for all device management, configuration, and user management events triggered in the network	✓	✓
Network tests (ping, traceroute, etc.) Quick connectivity checks like ping and traceroute for network diagnostics.	✓	✓
CLI commands, remote console, support logs	✓	✓
Client connectivity health Monitors client connection status and performance	✓	✓
Firewall sessions troubleshooting Displays active firewall sessions and flow details for quick issue diagnosis		✓
Live troubleshooting—live events, go live Real-time diagnostics with live events and go live for immediate issue resolution.	✓	✓
PCAP and log collection Collects packet data and system logs for advanced troubleshooting.	✓	✓
Troubleshooting recipes Provides guided, step-by-step workflows to resolve common network problems.		✓
Live chat Enables real-time communication with support for immediate assistance		✓
Packet capture (dynamic) Captures live traffic for detailed analysis.	✓	✓
Monitoring		
Events	✓	✓

Features	Foundation	Advanced
Unified dashboard view of generated events related to device provisioning, configuration, and user management.		
Alerts Real-time alerts for network, device, and client status changes.	✓	✓
Health dashboards Review network health, summary, and Wi-Fi connectivity dashboards for an overall view of network performance and connectivity status for each client endpoint	✓	✓
Config health Provides a network-wide view of device configuration status, highlighting synchronized, out-of-sync, or updating devices and pinpointing root causes like validation, distribution, or import errors	✓	✓
Client, device, network, global, application Unified dashboards for monitoring performance, connection status, network health, and applications accessed across all sites globally.	✓	✓
Performance/usage dashboards Provides predefined and customizable reports with 90-day retention.	✓	✓
AI search Generative AI-powered, intent-based search engine that delivers fast, accurate answers for network status, configuration, troubleshooting, and more.	✓	✓
Advanced network insights Automatically detect a broad range of anomalies observed at the AP, connectivity, and client level with specific details on the occurrences for faster troubleshooting, root cause analysis, and incident resolution. View the full list here		✓
Inventory and subscription View and manage device inventory and subscription status across the network.	✓	✓
Sessions visibility Displays real-time and historical network traffic sessions, including allowed and blocked flows, helping administrators monitor traffic patterns, validate security policies, and analyze potential breaches.	✓	✓
Foundation network insights Provides actionable insights into network performance and usage trends.	✓	✓
Presence analytics		
Presence analytics Enables businesses to collect and analyze user presence data and real-time data on user footprints in public venues, enterprise environments, and retail hubs	✓	✓
Common services		
Firmware standard upgrade Updates device firmware to the latest version with a reboot	✓	✓
Firmware live upgrade Updates device firmware to the latest version with zero downtime	✓	✓
Config backup and restore Secure backup and quick restoration of device configurations	✓	✓
Certificate management Manages installation, renewal, and validation of security certificates for network devices.	✓	✓

Features	Foundation	Advanced
Application performance monitoring		
Bell icon Shows alerts and notifications for network events and device status	✓	✓
App visibility Uses deep packet inspection (DPI) to identify which applications and websites are being used across the network, their categories, usage patterns, and security posture.	✓	✓
UXI integration (upon purchase of separate UXI subscription) Integration with UXI to monitor application performance from an end-user perspective (upon purchase of a separate UXI subscription)	✓	✓
Application health monitoring Tracks application performance and user experience to detect issues like latency, jitter, and packet loss.		✓
Unified communications and collaboration—monitoring, QoS only Provides real-time monitoring and dynamic QoS prioritization for voice and video traffic to ensure consistent call quality	✓	✓
Security		
Network and role-based policy Enables role-based access control and policy enforcement for secure network segmentation.	✓	✓
WIDS Monitors the wireless environment to detect threats, rogue devices, and suspicious activity. Custom rules require advanced subscription.	✓	✓
RAPIDS (Rogue AP detection and classification) Quickly identify and act on interfering APs in the network for investigation or restrictive action.	✓	✓
HPE Aruba Networking Central NAC		
HPE Aruba Networking Central NAC (core)		
Provides seamless, secure way to onboard and authenticate end users and nonuser devices (cameras, printers, IoTs, etc.) to wired and wireless networks using integration with cloud identity stores such as Google Workspace™, Microsoft Entra ID, and Okta Workforce. Offers captive portal and HPE Networking air pass support for connecting to wireless network.	✓	✓
Note: Applies to: HPE Networking CX Software and HPE Aruba Networking Wireless Operating System		
HPE Aruba Networking Central NAC (pro)		
Provides advanced NAC functionalities like additional policy definition controls, bring your own certificate (BYOC), and third-party NAC support, and use of multiple identify providers (IDPs), along with all the HPE Aruba Networking Central NAC (core) features mentioned above.		
Note: HPE Aruba Networking Central NAC requires HPE Networking Gateway Software version 10.7.2 or later for third-party network access device (NAD) support Pro license is counted as per concurrent connected client. Applies to: HPE Networking CX Software and HPE Aruba Networking Wireless Operating System	* Add-on subscription	* Add-on subscription

* Add-on subscription: HPE Aruba Networking Central NAC, [refer to HPE Aruba Networking Central NAC subscription table](#)

Features	Foundation	Advanced
IoT integration		
IoT operations		
Turns APs into secure IoT gateways, providing visibility, app deployment via an IoT app store, and centralized management for virtual BLE low energy /Zigbee devices without extra hardware.	✓	✓
Note: Certain HPE Aruba Networking Wireless Operating System 10-specific partner integrations require an Advanced subscription.		
HPE Aruba Networking Central AI		
HPE Aruba Networking Central copilot		
Automates network operations, provides predictive insights, and simplifies troubleshooting across wired, wireless, and WAN environments.		✓
Agentic mesh actions (self-driving autonomous actions)		
Deliver autonomous, multi-agent orchestration for anomaly detection, root-cause analysis, and automated remediation—enabling true self-driving network operations		✓
Marvis actions		
Marvis actions turns network data into decisive action. It uses AI-native insights to proactively identify, diagnose, and resolve network issues across wired, wireless, WAN, and data center environments—either with guided recommendations or fully autonomous self-driving remediation.		✓
LEM		
Analyzes massive experience data to deliver predictive insights and proactive troubleshooting.		✓
AI assist (interactive CLI show/log generation)		
Dynamically runs CLI show commands and generates logs that can be used to troubleshoot gateway-related issues	✓	✓
AI assist—advanced (auto TAC notification and log submission)		
Option that automatically notifies HPE Networking TAC and sends the generated logs for accelerated support case management		✓
AOS-10 RF services (only applicable for APs)		
AirMatch		
Automates RF channel assignment, channel width, and radio power assignments using machine learning algorithms. Provides even distribution of radios across available channels to mitigate interference and maximize system capacity	✓	✓
ClientMatch		
Patented RF optimization technology that scans APs in the neighborhood to ensure that client devices associate with the best performing AP	✓	✓
Air Slice		
Dynamic application prioritization to ensure consistent performance for critical apps.	✓	✓
AirGroup		
Leverages zero configuration networking to enable services such as Apple® AirPrint, AirPlay, DIAL, DLNA Media, DLNA Print, Amazon Fire TV, and Google Cast™ from third-party devices in an efficient manner	✓	✓
WebCC		
Enhances security by providing real-time web content and reputation filtering. Enables you to classify website content based on reputation and take measures to block malicious sites	✓	✓
UCC—basic		
	✓	✓

Features	Foundation	Advanced
Delivers a seamless experience for voice/video calls and app sharing, while giving admins a clear view of collaboration app performance.		
UCC—Custom config, troubleshooting		
Enables custom QoS settings for collaboration traffic and provides detailed call/session analytics to troubleshoot voice and video quality issues.		✓
MultiZone		
Ideal for multitenancy Wi-Fi support where multiple organizations are housed in a single office space or for a single organization that requires separate secure networks and traffic segmentation capabilities		✓
Extensions (integration with third-party vendors)		
Policy and services manager (PSM)		
Manage on-premises AMD Pensando™ Policy and Services Manager, enabling distributed firewall and network policy orchestration for AMD Pensando™ switches (DSCs).	✓	✓
VMware vSphere®		
Connects to and monitors your VMware vCenter Server®, allowing visibility into VMware ESXi™ hosts	✓	✓
Workspace ONE Import device attributes and support credential-based or OAuth-based connections		✓
Security information and events management (SIEM)		
Threat events can be streamed to SIEM systems such as Splunk and Microsoft Sentinel to provide advanced visibility and monitoring		✓
CrowdStrike Falcon and Microsoft Defender		
Imports endpoint status and security-policy data and uses it to enrich client classification and dynamic tagging		✓
Streaming API		
Provides continuous telemetry and event streams for real-time monitoring and analytics		✓
Rest API		
Lets you pull network and device data or apply configurations through simple HTTP-based requests (using polling when needed)	✓	✓
Webhook		
Programmatically delivers real-time event notifications to external systems for automated workflows and integrations.	✓	✓
NetConductor		
Automates network configuration by identifying network topologies and building a secure fabric Orchestrates intent-based policy globally with dynamic segmentation		
Provides improved discovery, profiling, network access, and authentication control of all connected clients across campus and data center environments using DUR (distributed user role) for consistent policy enforcement.	✓	✓
Endpoint classification and behavior (client insights)		
Enables network and security administrators to discover, monitor, and automatically classify new and existing client devices that connect to a network AI-powered classification	✓	✓
Traffic (flow and app) correlation	✓	✓
Integration with HPE Networking ClearPass Policy Manager and HPE Aruba Networking Central NAC	✓	✓
Advanced classification (including ML-based IoT identification)		✓

Features	Foundation	Advanced
Tagging (automatic and manual)		✓
Third-party integrations (UEM and EDR)		✓
Policy optimization		✓
Behavioral and network-based insights		✓
Network detection—new country upload, abnormal data upload/download, suspicious protocols, new/excessive host access		✓
Location and asset services		
Zigbee services		
Provides Zigbee connectivity for IoT devices like smart locks and sensors via AP-based gateways, reducing complexity and enabling secure integration	✓	✓
BLE low energy services		
Enables BLE low energy connectivity for asset tracking, location services, and IoT applications through integrated or external radios	✓	✓
USB support for IoT integration		
Offers flexible USB interfaces on APs to connect and power IoT devices or radios, simplifying integration and eliminating dedicated gateways	✓	✓
Geo-located floorplans		
Visualizes network topology and RF coverage on-site maps, enabling administrators to upload and manage floorplans, place and plan APs, view live telemetry overlays, and analyze roaming, channel overlap, and IoT metrics.	✓	✓
AP auto locate		
Automatically determines AP location for improved management and troubleshooting.	✓	✓
AP auto placement		
Automatically places APs on floorplans for efficient deployment.	✓	✓
Broadcast LCI over-the-air		
Access points broadcast location configuration information (LCI) over Wi-Fi and BLE low energy, allowing client devices to determine precise location without overlay networks	✓	✓
Asset tag inventory dashboard		
Provides a centralized view to track, manage, and monitor BLE low energy asset tags in real time, enabling quick access to tag details, location history, and operational insights	✓	✓
Presence analytics		
Delivers actionable insights on visitor behavior and dwell time by analyzing Wi-Fi probe data, enabling improved engagement and space planning	✓	✓
Location analytics dashboard		
Provides real-time and historical location insights using trilateration algorithms, helping visualize client movement and optimize space utilization.	✓	✓
Zones		
Define and manage zones within floorplans for location-based analytics and services.	✓	✓

Features	Foundation	Advanced
HPE Networking Microbranch		
HPE Networking Microbranch Foundation		
Enables availability, orchestration, security, and monitoring features such as:		
Layer 2, layer 3, and mixed tunnels		
Data center and WAN redundancy		
HPE Aruba Networking Central NAC survivability	✓	✓
Route or tunnel orchestration		
Policy-based routing		
Dynamic subnet allocation		
Microbranch monitoring		
HPE Networking Microbranch Advanced		
Includes the previous capabilities and also enables WAN health visibility and cloud connect security for cloud inspection (for example, Zscaler)		✓

[Refer to the help center](#) for the list of supported IAPs, APs, and switches.

Features included in the HPE Networking CX Software [Refer to the help center](#) require HPE Aruba Networking Central Switch Advanced subscription when managed through HPE Aruba Central.

HPE Aruba Networking Central SaaS subscriptions for wireless gateways

In HPE Aruba Networking Wireless Operating System 10, all HPE Networking edge appliances are referred to as gateways rather than controllers since they act as a cloud gateway for wireless services that are deployed within HPE Aruba Central.

For wireless use cases, gateways are typically deployed in networks with thousands or tens of thousands of APs for improved scalability, seamless roaming between buildings, or for environments that require enhanced security services. Refer to the list of supported gateways.

[Read the HPE Networking gateways use cases document](#) for more details.

Table 6. Features for HPE Aruba Networking Central WLAN gateway subscriptions

Feature category	Feature
SD-LAN	Gateway clustering Combines multiple gateways that operate as a single entity to provide high availability and service continuity across a wireless network
	Tunneling Tunneling traffic from wireless and wired clients
	Routing Traffic can be routed using both static routing and OSPF
Configuration	Mobility gateway management Enables onboarding, configuration, deployment, monitoring, and general management of HPE Networking wireless gateways
	UI- and template-based group configuration Simplify deployment with template-based configuration and streamline provisioning of devices or groups of devices
	Configuration audit Review device configuration changes including errors and device-level overrides on an audit dashboard

Feature category	Feature
Monitoring and reporting	Network health and summary dashboards Review wired network performance to gain an overall view of the health status of all switches and connected clients
	Network topology Graphical representation of the site network layout with details of all devices being managed, including HPE Aruba Networking Wireless AOS-S switches, HPE Networking Wireless CX Software switches, HPE Aruba Networking Access Points, HPE Networking gateways, and third-party devices
	Client list and details Review unified list of all clients that are connected to APs, switches, or gateways in the network with performance status, connection status, and more
	Application visibility Allows for the creation of application-specific firewall policies and includes features such as DPI and application-level monitoring to assess user-impacting issues
Monitoring and reporting	WebCC Enhances security by providing real-time web content and reputation filtering. Enables you to classify website content based on reputation and take measures to block malicious sites
	Data access – Access to all monitoring and reporting data for up to 90 days – Access to historical client summary report data for up to one year
	Audit trail Review total number of logs generated for all device management, configuration, and user management events triggered in the network
	Alerts and events Unified dashboard view of generated alerts and events pertaining to device provisioning, configuration, and user management
Agentic AIOps	AI search GenAI-powered search engine trained on multiple LLMs that enables operators to quickly and easily find relevant information related to network devices or status (for example, gateway down), configuration and troubleshooting tips, and more. Search results are based on user intent and informed by the vast HPE Networking data lake. Search-driven navigation and LLM-generated summarizations streamline the process, reducing time spent clicking through menus or documents
	Network insights Automatically detect a broad range of anomalies observed at the wireless gateway level with specific details on the occurrences for faster troubleshooting – Includes availability insights such as gateway has high memory usage or high CPU usage – Class and company baselines are also supported
	AI assist Dynamically runs CLI show commands and generates logs that can be used to troubleshoot gateway-related issues

Feature category	Feature
Troubleshooting	Troubleshooting tools – Network check—run diagnostic checks on networks and troubleshoot client connectivity issues – CLI commands—perform network health check at an advanced level using command categories
	Live events Information required to troubleshoot issues related to a client issue in real time
API	NB API 5000 API calls/day base limit which dynamically increases based on the subscribed device count
	Streaming API Enables you to subscribe to a select set of topics, instead of polling the NB API to get continuous state and stats messages. Also enables you to write value-added applications based on the aggregated context (for example., get notified of events such as the up and down status of devices)
Security	HPE Aruba Networking Central NetConductor fabric wizard Enables the creation of EVPN/VXLAN overlays with an intuitive, GUI to aid the adoption of role-based policies and dynamic segmentation at global scale with distributed enforcement for campus, SD-Branch, and data center environments. Centralized policy enforcement can also be used for smaller locations with the help of firewall and gateways

Table 7. Details of Foundation and Advanced network insights for APs, switches and gateways

Description	Foundation	Advanced
Access point firmware recommendation	✓	✓
Switch firmware recommendation	✓	✓
Gateway firmware recommendation	✓	✓
Enable WPA3 for better security	✓	✓
Power save recommendation for access points	✓	✓
Enable Wi-Fi 6 to improve WLAN performance	✓	✓
Roaming recommender	✓	✓
Association max clients threshold configuration	✓	✓
Wireless client onboarding experience	✓	✓
Wired client connectivity experience	✓	✓
AP health insights	✓	✓
Switch health insights	✓	✓
Access point placement insight	✓	✓
Access point coverage resiliency	✓	✓
Application performance analytics	✓	✓
Optimize bandwidth on 5 GHz radio to improve WLAN performance	✓	✓
Coverage holes have been detected	✓	✓
STP anomaly recommender	✓	✓
Improve RF resiliency by swapping APs between switches in the stack	✓	✓
Optimize WLAN DFS configuration to improve performance	✓	✓
Enable 6 GHz radio with optimal bandwidth to improve WLAN performance		✓
Gateway WAN uplinks have higher latency than comparable peers		✓

HPE Aruba Networking Central subscriptions for HPE Networking SD-Branch Gateways

HPE Networking SD-Branch comprises of an HPE Aruba Networking Central SD-WAN software subscription for each 70xx, 90xx, or 72xx branch gateway, as well as the headend gateway/concentrator. The HPE Aruba Networking Central SD-WAN Foundation, Foundation Base, and Advanced subscription are described as follows. The Foundation Base license is applicable for branch gateways and not for VPN concentrators (VPNC).

For all 70xx and 72xx gateways, the Foundation subscription does not have a capacity limit (that is client device limit). However, for the 7005, 7008, 9004, and 9012 gateways, a Foundation Base capacity subscription is available. The 7005, 7008, 9004, and 9012 Foundation Base subscription is limited to 75 client devices in the branch.

Table 9. HPE Aruba Networking Central subscriptions and platform mapping for HPE Networking SD-Branch Gateways

Foundation Base	Foundation Base + security	Foundation	Foundation + security	Advanced	Advanced + security
– 7005	– 9004	– 70xx	– 90xx	– 70xx	– 90xx
– 7008	– 9004-LTE	– 72xx	– 91xx	– 72xx	– 91xx
– 9004	– 9012	– 90xx	– 92xx	– 90xx	– 92xx
– 9004-LTE	– (Limited to 75 client concurrent endpoints in the branch)	– 91xx		– 91xx	
– 9012		– 92xx		– 92xx	
(Limited to 75 client concurrent endpoints in the branch)					

Table 10. HPE Aruba Networking Central management features for HPE Networking SD-Branch Gateways
(by subscription tier)

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
Configuration						
Branch gateway and VPNC management Enables onboarding, configuration, deployment, monitoring, and general management of HPE Networking gateways, and VPNCs	✓	✓ Note: Applicable for branch gateways only, not for VPNCs	✓	✓	✓	✓
Group-based configurations Simplify deployments with hierarchical group/device-based configurations to streamline provisioning and operations	✓	✓	✓	✓	✓	✓
Configuration audit Review device configuration changes including errors and device-level overrides on an audit dashboard	✓	✓	✓	✓	✓	✓

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
SD-LAN						
See table 6 in the wireless gateway section for a list of SD-LAN features. The SD-LAN features listed there also apply to HPE Networking SD-Branch Gateway deployments.						
SD-WAN						
IPSec VPN						
Ensures data flows between networks are encrypted. When configured, the IPSec tunnel to the gateway secures corporate data	✓	✓	✓	✓	✓	✓
Note: You can also configure an IPSec tunnel from a virtual gateway using HPE Aruba Networking Central						
Client VPN (VIA)						
Software download for client devices that enables secure connectivity to enterprise networks by terminating traffic directly to an HPE Networking virtual or headend gateway. Within HPE Aruba Networking Central, operators get full visibility into the connection status, location, datapath, and more for monitoring and troubleshooting	✓	✓	✓	✓	✓	✓
Routing						
Traffic can be routed across multiple private or public WAN uplinks based on application type and link health, device profile, user role, and destination. Supported protocols include BGP, OSPF, and static routes	✓	✓	✓	✓	✓	✓

Features	Foundation	Foundation Base	Foundation + security	Foundation + security	Base	Advanced	Advanced + security
Orchestration: tunnel, route, cloud connectivity Provides end-to-end orchestration to easily distribute routes and build scalable and secure VPN tunnels on-demand. The orchestrator service also simplifies the deployment of virtual gateways within AWS and Microsoft Azure public cloud infrastructure by automating cloud discovery, onboarding, and management	✓	✓	✓	✓	✓	✓	✓
Dynamic path steering Intelligently steers network traffic across multiple WAN uplinks. Configured policies determine which WAN link each application should use based on SLAs for users, roles, and destinations, and leverages loss, latency, jitter, and utilization metrics that are updated every few seconds	✓	✓	✓	✓	✓	✓	✓
Link redundancy Helps ensure high availability so that if one WAN link fails, the other takes over and restores traffic forwarding for continuity of operations	✓	✓	✓	✓	✓	✓	✓
High availability (active-standby or active-active) Provides a highly available network, where the data center, VPNC, and gateway failover redundancy features allow network administrators to significantly reduce downtime and traffic disruptions. Supports active-standby or active-active configuration	✓	✓	✓	✓	✓	✓	✓

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
Application-based policies						
Assists in DPI of application usage by clients. Using this configuration, you can define applications, security, and service aliases, as well as configure access control lists (ACLs) to restrict user access to an application or application category	✓	✓	✓	✓	✓	✓
Full SD-LAN control						
Displays a graphical representation of the LAN link availability of a branch gateway, and also provides a summary of all the LAN interfaces and port details	✓	✓	✓	✓	✓	✓
Monitoring and reporting						
Network health and summary dashboards						
Provides at-a-glance views of the health status of all sites, links, and network devices, including APs, switches, gateways, and connected clients	✓	✓	✓	✓	✓	✓
Network topology						
Graphical representation of the site network layout with details of all devices being managed, including HPE Aruba Networking Wireless AOS-S switches, HPE Aruba Networking Wireless HPE Networking CX Software switches, HPE Aruba Networking Access Points, HPE Networking gateways, and third-party devices	✓	✓	✓	✓	✓	✓
Client list and device details						
Review unified list of all clients that are connected to access points, switches, or gateways in the network with performance status, connection status and more	✓	✓	✓	✓	✓	✓

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
Application visibility Allows for the creation of application-specific firewall policies and includes features such as DPI and application-level monitoring to assess user-impacting issues	✓	✓	✓	✓	✓	✓
WebCC WebCC, policy, and reputation service that helps enforce acceptable network usage policies, including blocking or rate-limiting certain connections	✓	✓	✓	✓	✓	✓
Data access Access to all monitoring and reporting data for up to 90 days Access to historical client summary report data for up to one year	✓	✓	✓	✓	✓	✓
Audit trail Review total number of logs generated for all device management, configuration, and user management events triggered in the network	✓	✓	✓	✓	✓	✓
Alerts and events Unified dashboard view of generated alerts and events pertaining to device provisioning, configuration, and user management	✓	✓	✓	✓	✓	✓
Agentic AIOps						
AI search GenAI-powered search engine trained on multiple LLMs that enables operators to quickly and easily find relevant information related to network devices or status (for example, poor WAN connectivity), configuration and troubleshooting tips, and more. Search results are based on user intent and informed by the vast HPE Networking data lake. Search-driven navigation and LLM-generated summarizations streamline the process, reducing time spent clicking through menus or documents	✓	✓	✓	✓	✓	✓

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
Network insights Automatically detect a broad range of anomalies observed at the gateway, WAN link, and client level with specific details on the occurrences for faster troubleshooting. Examples include gateway down, VPNC down, tunnel down, high CPU utilization, high memory utilization, class and company baselines are also supported	✓	✓	✓	✓	✓	✓
Network insights (Advanced) Advanced WAN insights include: – Underperforming WAN link in use – WAN link underperforming compared to peers					✓	✓
AI assist Dynamically runs CLI show commands and generates logs that can be used to troubleshoot gateway-related issues	✓	✓	✓	✓	✓	✓
AI assist (Advanced) Option that automatically notifies HPE Networking TAC and sends the generated logs for accelerated support case management					✓	✓
Troubleshooting						
Troubleshooting tools – Network check—run diagnostic checks on networks and troubleshoot client connectivity issues – CLI commands—perform network health check at an advanced level using command categories	✓	✓	✓	✓	✓	☒✓

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
Security						
Stateful firewall						
Provide stateful inspection of packets for an additional layer of security by tracking the state of network connections and using the state information from previous communications to monitor and control new communication attempts	✓	✓	✓	✓	✓	✓
Web content filtering						
Enhances branch security by providing real-time web content and reputation filtering. Allows you to classify website content based on reputation and take measures to block malicious sites	✓	✓	✓	✓	✓	✓
Intrusion detection and prevention						
Monitors, detects, and prevents threats coming through inbound or outbound traffic, adding an extra layer of security that focuses on users, applications, and network connections			✓	✓		✓
Antimalware						
Antimalware is built into supported HPE Networking gateways for additional network protection by scanning, detecting, and preventing threats			✓	✓		✓
Role-based access policy						
Determines client access based on the user roles assigned to a client. Once the role is assigned, traffic and security policies are applied to devices based on the role	✓	✓	✓	✓	✓	✓
Security dashboard						
Provides IT teams with network-wide visibility, multidimensional threat metrics, threat intelligence data, correlation and incident management			✓	✓		✓

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
SIEM integration Threat events can be streamed to security information and events management (SIEM) systems such as Splunk to provide advanced visibility and monitoring			✓	✓		✓
Client insights Enables network and security administrators to discover, monitor, and automatically classify new and existing devices that connect to a network Foundation subscription includes: – Basic client MAC classification based on telemetry data – Client family, client category, client AOS ML-based client classification – HPE Aruba Networking Central NAC integration	✓	✓	✓	✓	✓	✓
HPE Aruba Networking Central NetConductor fabric wizard Enables an automated mechanism for gateways to exchange source role information to create role-to-role policies across the SD-WAN environment	✓	✓	✓	✓	✓	✓
Services						
SaaS express Discovers SaaS application servers, continuously monitors the health of servers and WAN links, and dynamically steers traffic to the best-available server to improve performance and user experience; includes a drill-down dashboard and quality of experience score so IT can analyze SaaS performance issues					✓	✓
API						
North-bound (NB) API 5000 API calls/day base limit which dynamically increases based on the subscribed device count	✓	✓	✓	✓	✓	✓

Features	Foundation	Foundation Base	Foundation + security	Foundation Base + security	Advanced	Advanced + security
Streaming API Enables you to subscribe to a select set of services, instead of polling the NB API to get an aggregated state. Also enables you to write value-added applications based on the aggregated context (for example, get notified of events such as the up and down status of devices)					✓	✓

Use cases for HPE Aruba Networking Central Advanced SD-Branch subscriptions

The Foundation-level subscriptions address a wide range of use cases within the base price for HPE Networking SD-Branch deployments. However, several premium features may be desirable, which are only available with security add-ons or Advanced subscriptions. Refer to the sample list of the following use cases.

If you require:

1. **AI-native insights into WAN health:** Selecting the Advanced subscriptions will enable network insights that help you compare the performance of links across peer sites, as well as automatically redirect traffic over alternative paths when existing links are underperforming, congested, or not satisfying SLAs.
2. **Advanced threat management and security:** Selecting the security add-on subscription SKUs will enable more advanced protection mechanisms for your branches and other remote locations, including IDS/IPS, antimalware, and more.
3. **Better SaaS application performance:** Selecting the Advanced subscriptions enables SaaS express, which can improve the performance of critical SaaS applications such as Microsoft 365 by dynamically sending traffic over the optimal WAN link and to the best hosting server.

Table 17. HPE Networking virtual gateway subscription SKUs and descriptions

Table 18. Features for HPE Networking bridge subscriptions

Deployment and configuration
UI- and template-based group configuration Simplify deployment with template-based configuration and streamlined provisioning of devices or groups of devices.
Auto-commit Apply configuration changes instantly with the auto-commit state enabled.
Configuration audit Review device configuration changes including errors and device-level overrides on an audit dashboard.
Monitoring and reporting
Network health and cellular connectivity dashboards Review network health, summary, and cellular connectivity dashboards for an overall view of network performance and connectivity status for each client endpoint.
Data access – Access to all the above monitoring data for up to 30 days – Access to reporting data for up to 90 days – Access to historical client summary report data for up to 1 year
Audit trail Review total number of logs generated for all device management, configuration, and user management events triggered in the network.
Alerts and events Unified dashboard view of generated alerts and events that pertain to device provisioning, configuration, and user management.
Agentic AIOps
AI Search Natural language processing (NLP) engine that combs the HPE Aruba Networking Central cloud data lake and enables operators to quickly locate specific clients, devices, and infrastructure connected to the network based on plain-language search criteria (e.g., poor cellular connectivity). Also retrieves relevant help or support documentation for operational ease.
Network insights Automatically detect a broad range of anomalies observed at the access point, connectivity, and client level with specific details on the occurrences for faster troubleshooting, root cause analysis, and incident resolution. Includes: – Cellular connectivity – Signal quality – Carrier availability
AI assist Dynamically runs CLI show commands and generates logs that can be used to troubleshoot bridge-related issues.

Troubleshooting

Troubleshooting tools

- Network check—run diagnostic checks on networks and troubleshoot client connectivity issues.
- CLI commands—perform network health check at an advanced level using command categories.

Live events

Information required to troubleshoot issues related to a bridge, or a site in real time.

API

Streaming API

Enables you to subscribe to a select set of topics, instead of polling the NB API to get continuous state and stats messages. Also enables you to write value-added applications based on the aggregated context (e.g., get notified of events such as the up and down status of devices).

HPE Aruba Networking Configurable SaaS SKUs

Overview

HPE Aruba Networking Configurable SaaS SKUs provide a flexible, subscription-based licensing model designed to align network management capabilities with business requirements. These SKUs enable customers to select the appropriate feature tier, payment model, billing frequency, and subscription term across Aruba Central-managed wireless, switching, gateway, and virtual gateway environments.

Key Benefits

- **Flexible Consumption:** Subscription or upfront payment options.
- **Multiple Billing Models:** Annual, monthly, quarterly, or upfront billing.
- **Scalable Licensing Terms:** Available in 1, 3, 5, 7, and 10-year subscriptions.
- **Tier Selection:** Foundation, Advanced, and Security-enhanced licensing options.
- **Cloud or On-Premises Management:** Aruba Central Cloud and Central On-Premises support.
- **Future-Proof Deployment:** Easily scale as networking requirements evolve.

Table 21. HPE Aruba Networking Central Configurable Subscriptions

SKU	Description
JN001AAS	HPE Aruba Networking Central AP base SaaS
JN002AAS	HPE Aruba Networking Central Switch base SaaS
JN003AAS	HPE Aruba Networking Central Gateway base SaaS (Applicable for both WLAN and SD-WAN)
JN004AAS	HPE Aruba Networking Central Gateway base SaaS (for virtual gateway)

Support features and optional add-ons

HPE Aruba Networking devices (access points, switches, and gateways) that have an active HPE Aruba Networking Central SaaS subscription are fully supported and include:

- 24x7 priority technical support for troubleshooting
- Software updates and upgrades for HPE Aruba Central and all hardware products managed by HPE Aruba Central
- Options to upgrade parts replacement for all hardware managed by HPE Aruba Central with an [HPE Aruba Networking Foundational Care](#) contract for either next business day exchange or 4-hour on-site repair and replacement.

In addition to hardware replacement options, you can also optionally add [HPE Networking Services - Advanced Care](#) for fast access to senior HPE Networking TAC engineers, who are assigned as a single point of contact for case management, reducing the time spent addressing and resolving issues.

HPE Aruba Networking Central licenses include a 30-day grace period after the expiration date. Please verify the license term and purchase date. The notification emails are sent to the workspace administrator 90, 60, 30 and 1 days before expiry. Details available [here](#).
