Frequently Asked Questions

What is the difference between dual SIM and dual modem?

All FortiExtender models support dual SIM slots to enable redundancy between carriers based on various metrics like signal strength and data plan. Single modem units may only initiate a connection to one carrier at a time. Dual modem models are indicated by the “2” in the model number (i.e. 202F,212F) and allow you to have two active wireless connections for faster failover and path selection.

What are FortiGate and FortiSASE LAN extensions?

FortiGate LAN extension allows you to seamlessly connect from your FortiExtender locations into a remote FortiGate at a HQ or centralized location via VxLAN. From your connected FortiGate, you can control the ports and connectivity of FortiExtender locations. FortiSASE LAN extension works similarly, but with your connection to the FortiSASE Cloud account. FortiExtender 200F supports FortiSASE LAN extension to easily connect your microbranch locations into SASE for cloud- delivered security and connectivity. We will be introducing three new models in 2024 for Thin Edge deployments, called FortiBranchSASE.

Can I use a FortiExtender Vehicle at fixed sites?

Yes, FortiExtender Vehicle is a great device for fixed sites with harsh environmental conditions. As an IP64 ruggedized device, FortiExtender Vehicle offers protection against extreme temperatures, shock, vibration, humidity, and are dust and splash tight. In addition, you can leverage LAN extension with your FortiExtender Vehicle, deploying FortiGuard protections, including the OT Security Service, from a centralized FortiGate at the remote FortiExtender Vehicle site.
